**A THESIS SUBMITTED TO THE SCHOOL OF POSTGRADUATE STUDIES IN
PARTIAL FULFILMENT OF THE REQUIREMENTS FOR THE AWARD OF THE
DEGREE OF DOCTOR OF PHILOSOPHY (Ph.D) IN CIVIL ENGINEERING
(SURVEYING AND GEOINFORMATICS) IN THE DEPARTMENT OF CIVIL
ENGINEERING, COLLEGE OF ENGINEERING, COVENANT UNIVERSITY, OTA,
OGUN STATE NIGERIA.**

OCTOBER, 2021

ACCEPTANCE

This is to attest that this report is accepted in partial fulfillment of the requirements for the award of Degree of Doctor of Philosophy (**Ph.D**) in Civil Engineering (Surveying and Geoinformatics) in the Department of Civil Engineering, College of Engineering, Covenant University, Ota, Ogun State, Nigeria.

DECLARATION

I, OJO ADEREMI SAMUEL (CU/PC060300), declare that this research was carried out by me under the supervision of Prof. Joseph O. Olusina of Department of Surveying & Geoinformatics, University of Lagos, and Dr. Ben U. Ngene of Department of Civil Engineering, Michael Okpara University of Agriculture, Umudike, Abia State. I attest that the thesis has not been presented either wholly or partially for the award of any degree elsewhere. All sources of data and scholarly information used in this thesis are duly acknowledged.

OJO, ADEREMI SAMUEL

CERTIFICATION

We certify that this work titled "**Impact of Climate Change on Land - Use and Land - Cover of Yewa South Local Government Area,**" is original research carried out by **OJO, ADEREMI. SAMUEL (CU/PC060300)**, in the Department of Civil Engineering, College of Engineering, Covenant University, Ota, Ogun State, Nigeria, under the supervision of Prof. Joseph O. Olusina and Dr. Ben U. Ngene. We have examined and found the work acceptable for the award of the degree of Doctor of Philosophy in Civil Engineering.

Prof. Joseph O. Olusina

DEDICATION

This research is dedicated to the memory of my late mother, Mrs. Racheal Idowu, Ojo.

ACKNOWLEDGEMENTS

This work was completed due to the support I received from different sources. First of all, I like to give glory to my heavenly father for his mercy and sufficient grace that enabled me to cope with challenges of academic life. I sincerely acknowledge my dear father, the Chancellor, Chairman of the Board of Regents, Covenant University, Dr. David O. Oyedepo, whose vision and values provided a blossoming platform for me to fulfil my career. I also sincerely acknowledge the Covenant University management team led by our amiable Vice-Chancellor, Professor. Abiodun H. Adebayo for his drives toward the actualization of the 1-of-10-in-10 mandate and for putting policies and strategies in place which birth this research. I equally express my profound gratitude to the Registrar, Dr. Oluwasegun P. Omidiora for his support and contribution to the drive of the University's **CORE VALUES** and the vision 10-2022 mandate. I truly appreciate the Dean, School of Postgraduate Studies (SPS), Prof. Akan B. Williams, for his unalloyed support and contribution at various levels of this research. I will also appreciate the Sub-Dean (SPS), Dr. Emmanuel O. Amoo for his support and contribution at various levels of this research. Your effort toward the structuring and quality required to ensure that this research was a success is commendable.

I would like to express my profound gratitude to the Dean of College of Engineering, Professor David O. Omole for his advice and input in the course of this study and the head of Department of Civil Engineering, Professor Ede, N. Anthony, for his contributions to the success of this program. I would also express my sincere appreciation to the members of the Postgraduate Committee in the Civil Engineering Department for their timely response and action at various stages of this research. A debt of gratitude goes to the immediate past Head of Department of Civil Engineering, and currently, the Director of Covenant University Centre for Instrument and Research Facilities (CUCIRF), Professor David O. Olukanni, for his enormous contributions and advice toward completing this work. I pray that the amazing grace of God that made Jabez more honourable than his brethren shall distinguish him among men. I cannot forget to thank Postgraduate Coordinator, Civil Engineering Department, Dr. Gideon O. Bamigboye and all other Faculty and Staff in the Department of Civil Engineering with whom I share deep times of thought and who have patiently extended all manner of assistance.

My most reflective appreciation goes to my supervisor, Professor Joseph O. Olusina (University of Lagos), and my co-supervisor, Dr. Ben U. Ngene, Civil Engineering Department, Michael Okpara University of Agriculture, Umudike Abia State, for his encouraging comments, suggestions, and patience to guide me through the course of the research. I also appreciate them for their invaluable ideas and knowledge that proved indispensable in executing this research's execution. I am also grateful to Professor James B. Olaleye Surveying Department, University of Lagos for his support toward the completion of this program. I will like to thank Professor. Kenneth O. Adekalu, Obafemi Awolowo University, Ile Ife, for his advice, inspiring guidance, contribution in a most pleasant manner, and his valuable suggestions toward the completion of this work. My appreciation also goes to Professor Oluseyi O. Ajayi, and Professor Francis E. Idachaba. I sincerely appreciate your effort toward the structuring and quality required to ensure that this research was a success. Thank you all for your encouragement and support.

I am also grateful to my colleagues at the University of Lagos, Dr. Mahmound Solomon, who always assists on complex scientific challenges. My gratitude also goes to Tosin Julius, Jimoh Olalekan Abeeb, Shittu Ibrahim Opeyemi, Olagoke E. Daramola, and Chukwuma J. Okolie for their support and cogent criticisms, often rendered in a most pleasant manner. Through their support, I was able to appreciate the rudiment of Remote Sensing and GIS. Thank you all for your precious time you share with me. I sincerely thank my loving and caring wife, Mrs. Victoria Adenike Ojo, and our loving children, Adelayo Ojo, Ayomide Ojo, Oluwatosin Ojo, and Victor- John Adebola, Ojo. Without you, this program would not have been possible. I say thank you for paying the sacrifices, especially your moral and prayerful assistance toward the completion of this work. I also appreciate the grace of God in your life to always stay alone at home while I was away in Ota, Ogun State. This success is compensation for your patience. Finally, to all the people that have contributed to the success of this work, I would say a big thank you for your support, and blessings of God will not cease from you all.

ABSTRACT

Agricultural products, which include farming and forestry, and raising livestock, are the main occupation of Yewa South Local Government of Ogun State in Nigeria which is the case in this study area. Climate change has been a significant threat to the study area. The burning of bush has given rise to an increase in greenhouse gas pollution in the atmosphere. The intensive use of land through dynamic human activities and climate changes has also affected the study area's agricultural product. It is necessary to understand the dynamic and climatic changes of the study area. It is on this basis, that this study was carried out to determining the effect of climate change on land use/land cover of the study area. The specific objective is to model the impact of the relationship between climate change and land use/land cover change (LULC) and predict for future planning of land use/land cover change of the study area. This study used multi-temporal data sets between 2000 and 2019 from LANDSAT-7 ETM+ and LANDSAT-8 OLI/TIRS, and climatic variables obtained from Ogun-Osun River Basin Development Authority. The general design and methods used in the study include image acquisition, image classification, and preparation of the thematic map. A supervised Parallelepiped classification scheme was used to classify the images into five different classes of LULC types. The classes are vegetation, wetland, waterbody, agricultural land and built-up. The study developed a multivariate regression model that established the relationship between climate data and (LULCC) that helped predict future planning of LULC of the study area. The LULC classification results revealed that the agricultural land use type was extensively used in the study area, with the percentage ranging from 33.82% (222.17km²) in 2000 to 66.56% (436.84km²) in 2011. The high value of yearly rainfall throughout the study period led to an increase in water resources' agricultural consumption. The growth rate of the built-up area between 2000 and 2019 snowballed, rising from 3.85% in 2000 to 10.33%, with actual areal expansion increasing from 25.28 km². to 67.83 km². The rapid increase in the population during the year of study also attributed to the expansion of farmland, where many farmers obtained land for large-scale agriculture, suggesting that farmland is the most predominant LULC category in the study area. The technique to predict LULC distribution for 2040 was successful, and the results were compared with the LULC from 2000 to 2019. The study also established that there are distinct changes in climate variability between the years 2000 and 2019, leading to changes in the land use/land cover of the study area. The statistical analysis result indicated that the climatic parameters have an accuracy of 84.12 % Prediction for land use/land cover classification. The projected LULC for 2040 revealed potential expansion in agriculture and growth in population. It is envisaged that the study will help improve the social-economic activities without further disintegrating the environment for planning, administration, and exploitation of lands in the Yewa South Local Government area of Ogun State, Nigeria.

KEYWORDS: Land use, Land cover, Multivariate, Climate, Change detection.
