**SHORT-TERM MOBILE DATA TRAFFIC FORECASTING:
A CASE STUDY OF KADUNA STATE, NIGERIA**

BY

**PAUL, JOAN EZRA
(19PCK01988)**

B.Eng Electrical And Electronics Engineering, Landmark University Omu-Aran

**A DISSERTATION SUBMITTED TO THE SCHOOL OF POSTGRADUATE
STUDIES IN PARTIAL FULFILLMENT OF THE REQUIREMENTS FOR THE
AWARD OF MASTER OF ENGINEERING (M.Eng) DEGREE IN
INFORMATION AND COMMUNICATION ENGINEERING, IN THE
DEPARTMENT OF ELECTRICAL AND INFORMATION ENGINEERING,
COLLEGE OF ENGINEERING, COVENANT UNIVERSITY**

MAY, 2022

ACCEPTANCE

This is to attest that this dissertation was accepted in partial fulfillment of the requirements for the awards of the degree of Masters of Engineering in Information and Communication Engineering, Department of Electrical and Information Engineering, College of Engineering, Covenant University Ota, Nigeria.

Mr. Taiwo B. Erewunmi
(Secretary, School of Postgraduate Studies)

Signature and Date

Prof. Akan B. Williams
(Dean, School of Postgraduate Studies)

Signature and Date

DECLARATION

I, **Paul, Joan Ezra (19PCK01988)**, declare that this research was carried out by me under the supervision of Dr. Adeyinka A. Adewale of the Department of Electrical and Information Engineering, College of Engineering, Covenant University, Ota, Nigeria. I attest that the dissertation has not been presented either wholly or partially for the award of any degree elsewhere. All sources of data and scholarly information used in this dissertation are duly acknowledged.

PAUL, JOAN EZRA

Signature and Date

CERTIFICATION

We certify that this dissertation titled "**A SHORT-TERM MOBILE DATA TRAFFIC FORECASTING: A CASE STUDY OF KADUNA STATE, NIGERIA**" is an original research work carried out by **PAUL, JOAN EZRA (19PCK01988)** in the department of Electrical and Information Engineering, College of Engineering, Covenant University, Ota, Ogun State, Nigeria under the supervision of Dr. Adeyinka A. Adewale. We have examined and found this work acceptable as part of the requirements for the award of Master of Information and Communication Engineering.

Dr. Adeyinka A. Adewale
(Supervisor)

Signature and Date

Prof. Emmanuel Adetiba
(Head of Department)

Signature and Date

Prof. Adeseko Ayeni
(External Examiner)

Signature and Date

Prof. Akan B. Williams
(Dean, School of Postgraduate Studies)

Signature and Date

DEDICATION

I dedicate this work to God Almighty and the Ezra's family

ACKNOWLEDGEMENT

I want to thank God for the strength and grace to complete this dissertation; to Him alone be all the glory. I thank the Chancellor for yielding to God's calling and creating a platform for individuals like myself to learn, relearn, and unlearn. I appreciate my parent, Mr and Mrs Paul Ezra for their timeless support, financially and emotionally, and their prayers although my master's program. I would also like to appreciate my siblings for their words of encouragement anytime we communicate. I thank my supervisor, Dr Adewale Adeyinka A. for his advice, encouragement, and support and prayers throughout my project. I appreciate Prof. Francis Idachaba for his timeless support and mentoring during my project. I also appreciate Prof Emmanuel Adetiba and Prof Sanjay Misra for using his laboratory as my workspace during my project year. To Mr. Matthew Ibiwoye, thank you for helping me with the major resources I needed for this work to be a success. To Mr. Felix Ajibulu, thank you for your timeless support. To my esteem colleagues, I say a big thank you; you people made my master's years fun despite the work, thank you all for supporting me. You people are the best.

ABSTRACT

Mobile networks are essential for today's seamless communication. As more individuals subscribe to mobile networks, the need for mobile networks has increased significantly. The network operators must devise strategies to handle the enormous demand of mobile network resources, such as spectrum, which are costly. There is a need for effective network resource management as well as a mechanism to predict future networks that can be used for network management and planning. This study uses real-life data to forecast mobile traffic using Kaduna State as a case study and compared prediction algorithms with the hybrid. The data set was gotten from a network provider. The hybrid combination of LSTM and AGB has been proposed in this study, and its performance has been compared with LSTM and ARIMA using MAE, RMSE and MAPE as evaluation metrics. The prediction performance of the algorithms was carried out on ten base stations with both the highest and lowest traffic from two local government areas, which are Kaduna South and Kaduna North. The LSTM-AGB outperformed LSTM and ARIMA. From the performance evaluation, the RMSE, MAPE and MAE of all the selected base stations in LSTM-AGB have a lower value than LSTM and ARIMA, which indicates a good fit of the model. It was observed that the hybrid algorithm performed better in base stations with high traffic.

Keywords: Mobile traffic, Long-Short Term Memory, Traffic forecasting, Cellular Network.
