**DEVELOPMENT OF AN ANN-BASED DEFECT DETECTION SYSTEM FOR  
PROCESS QUALITY OPTIMISATION IN BOTTLING INDUSTRY**

**BY**

**EMUOWHOCHERE OGHENEVWEGBA THANKGOD**

**(13CM015542)**

**SUBMITTED TO THE DEPARTMENT OF MECHANICAL ENGINEERING  
COVENANT UNIVERSITY, OTA OGUN STATE.**

**IN PARTIAL FULFILMENT OF THE REQUIREMENTS FOR THE AWARD OF  
THE MASTERS OF ENGINEERING DEGREE M.Eng (Hons.) IN MECHANICAL  
ENGINEERING.**

**SUPERVISOR: DR. ENESI Y. SALAWU**

**2022**

• **DECLARATION**

I, Emuowhochere Oghenevwegba Thankgod (13CM015542), declare that this project on “Development of an Artificial Neural Network Based Defect Detection System for Process Quality Optimisation in Bottling Industry”, is an original work done by me under the supervision of Dr. Enesi Y. Salawu, the department of Mechanical Engineering covenant university, Ota

EMUOWHOCHERE OGHENEVWEGBA. T

.....

Signature and Date

● **CERTIFICATION**

This is to certify that this project work on “Development of an Artificial Neural Network Based Defect Detection System for Process Quality Optimisation in Bottling Industry” was carried out by Emuowhochere ThankGod Oghenevwegba; with the Matriculation Number: 13CM015542.

Dr. Enesi Y. Salawu: .....

(Supervisor) Signature and Date

Prof. Joshua O. Okeniyi: .....

(Head of Department) Signature and Date

- **DEDICATION**

This research project is dedicated first to “THE ALMIGHTY GOD” for His enabling strength He bestowed on me in completing this work. Secondly to myself Emuowhochere ThankGod Oghenevwegba

- **ACKNOWLEDGEMNT**

I am most grateful to God Almighty, the sole provider of knowledge, wisdom, love, mercy and grace for his protections throughout the period of the programme. I sincerely appreciate my parents, Mr. and Mrs. Akpoviri Benson, for the unquantifiable love and financial assistance during this period. I also want to appreciate my supervisor, Dr. Enesi Y. Salawu who offered timely criticism and corrections that led me through the various stages of this project. May God bless you all in Jesus' name, Amen.

## ● ABSTRACT

The quality of a manufactured product is a major factor that contributes to the growth, productivity and sustainability of a manufacturing firm. This is the major reason a lot of resources both human and machines in the area of quality control and quality assurance. In bottling industries, (that is firms that make use of bottles as raw material, and firms that produce bottles as end product), quality control in the production floor is also vital part of the manufacturing process and here in Africa, human labour are mostly used for the quality control process and also to save cost. The use of these human factors in tracking possible defected in the production line has led to loss of material due to fatigue, which in turn affects the productivity of the manufacturing firm. The aim of this study is to develop an CNN based defect detection system that is capable of detecting possible defected bottles in the production line. The Convolutional Neural Network model was developed with; bottles with bad labels, bottles with bad caps and, bottle that met the quality requirement. These are the defects the model is expected to detect on the production line. The materials selected for this development of this system were; a server computer, raspberry pi 3A+, raspberry camera, and the CNN trained model. The raspberry pi serves as the client side of the setup which takes photos of bottles in the production line and sends them to the server running the CNN model. The training model of the CNN model was divided into two part which were; training of the CNN model with 100-pixels dataset and training of the CNN model with 300-pixel dataset. From the result obtained, the prediction accuracy of the trained model with 100-pixel dataset was 83.333% and that of the 300-pixel dataset was 90.81654%. Running the CNN model on the raspberry pi solo leads to an average response time of 15 minutes per prediction and this is not ideal for an industrial space. Running the raspberry pi as a client-side image collector reduced the response time of the setup to an average response time of 8 sec. This response time is ideal and better than the human factor response time.
