B.Sc. Computer Science, Landmark University, Omu-Aran

**A DISSERTATION SUBMITTED TO THE SCHOOL OF
POSTGRADUATE STUDIES IN PARTIAL FULFILMENT OF THE
REQUIREMENTS FOR THE AWARD OF MASTER OF SCIENCE
(M.Sc.) DEGREE IN MANAGEMENT INFORMATION SYSTEM IN
THE DEPARTMENT OF COMPUTER AND INFORMATION
SCIENCES, COLLEGE OF SCIENCE AND TECHNOLOGY,
COVENANT UNIVERSITY, OTA, OGUN STATE, NIGERIA**

DECEMBER, 2022

ACCEPTANCE

This is to attest that this dissertation is accepted in partial fulfillment of the requirements for the award of the degree of MASTER of Sciences in Management Information System in the Department of Computer and Information Sciences, College of Science and Technology, Covenant University, Ota, Nigeria.

Miss. Adefunke F. Oyinloye
(Secretary, School of Postgraduate Studies)

DECLARATION

I, **ETUKUDO, DEBORAH BASSEY (20PCH02191)**, declare that this research was carried out by me under the supervision of Dr. Olamma U. Iheanetu of the Department of Computer and Information Sciences, College of Science and Technology, Covenant University, Ota, Nigeria. I attest that the dissertation has not been presented either wholly or partially for the award of any degree elsewhere. All sources of data and scholarly information used in this dissertation are duly acknowledged.

ETUKUDO, DEBORAH BASSEY

Signature and Date

CERTIFICATION

We certify that this dissertation titled “**DEVELOPING A PHYSICIAN-PATIENT SPEECH RECOGNITION AND DOCUMENTATION MODEL FOR NIGERIAN HOSPITALS**” is an original research work carried out by **ETUKUDO, DEBORAH BASSEY (20PCH02191)**, in the Department of Computer and Information Sciences, College of Science and Technology, Covenant University, Ota, Nigeria under the supervision of Dr. Olamma U. Iheanetu. We have examined and found this work acceptable as part of the requirements for the award of Master of Science in Management Information System.

Dr. Olamma U. Iheanetu
(Supervisor)

Signature and Date

Prof. Olufunke O. Oladipupo
(Head of Department)

DEDICATION

I dedicate this work to the Almighty God, for His infinite wisdom, grace, and love over my life. Also, this work is dedicated to my loving parents who have both worked exceptionally hard to set me up for success.

ACKNOWLEDGEMENTS

I appreciate God almighty for the strength, grace, wisdom, and understanding to execute this study. Many thanks to the head of the department, Prof. Olufunke Oladipupo, and the entire members of the faculty for this opportunity. I appreciate my supervisor, Dr. Olamma U. Iheanetu for her guidance, support, and encouragement. I also appreciate my family, friends, and colleagues for their help and support.

ABSTRACT

Despite the increase in the use of automated systems for physician-patient consultation in developed countries, Nigerian hospitals are still actively using the traditional approach which implies using pen and paper or typing on the computer in documenting and extracting the conversation between the physician and the patient. This has been observed to cause long consultation time, burnout during consultations, bad consultation experience for the patient, etc. Due to the Nigerian accent, the present speech recognition system when tested with a Nigerian accent could not properly detect it. This study aims to develop an automatic speech recognition system for extracting and classifying structured data from physician-patient conversations done in a Nigerian hospital. A pretrained Wav2vec model was retrained with the primary data used in this work for better detection of the Nigerian accent. The accuracy score of the SOAP classification using a deep learning approach, gave a total of 83%, compared to that of the machine learning approach which gave a total accuracy of 82%. For the speech recognition system evaluation, the Word error rate, word information lost, and match error rate gave a better accuracy of 0.889, 0.800, and 0.896 respectively as compared to the TIMIT dataset which gave 0.999, 0.999, and 0.999 respectively. The proposed system performs better in the identification of the Nigerian accent than the existing system.

Keywords: Automatic Speech Recognition, Wav2vec, Electronic Health Record, SOAP Notes, Text Classification, MLP.
