DECLARATION

I, **OJO, EZEKIEL KADEJO (17PAD01720)** declare that this research work was carried out by me under the supervision of Prof. Samuel A. Iyase and Prof. Timothy A. Anake of the Department of Mathematics, College of Science and Technology, Covenant University, Ota, Ogun State, Nigeria. I attest that this thesis has not been presented either partially or wholly for the award of any degree elsewhere. All scholarly materials used in this research work are duly cited and acknowledged.

OJO, EZEKIEL KADEJO

CERTIFICATION

We certify that this thesis titled “**SOLVABILITY OF RESONANT FACTIONAL ORDER BOUNDARY VALUE PROBLEMS WITH TWO-DIMENSIONALKERNEL ON THE HALF-LINE**” is an original work carried out by **OJO, EZEKIEL KADEJO (17PAD01720)**, in the Department of Mathematics, College of Science and Technology, Covenant University, Ota, Ogun State, Nigeria, under the supervision of Prof. Samuel A. Iyase and Prof. Timothy A. Anake. We have examined and found the work acceptable as part of the requirements for the award of Doctor of Philosophy (Ph.D.) degree in Industrial Mathematics.

Prof. Samuel A. Iyase
(Supervisor)

DEDICATION

To God who enabled me to start and complete the study. And to others who stood by me to give needed encouragement and support.

ACKNOWLEDGEMENTS

I sincerely appreciate the Chancellor and Chairman, Board of Regent of Covenant University, Dr. David O. Oyedepo for making available a serene environment for me to carry out this research work.

I also appreciate the Vice-Chancellor, Covenant University, Prof. Abiodun H. Adebayo and the Ag. Registrar, Mrs Regina A. Tobi-David. I extend my gratitude to Prof. Akan B. William, the Dean, School of Postgraduate Studies, Dr. Emmanuel O. Amoo and Dr. Hezekiah O. Falola, the immediate past and present Sub-Dean respectively, School of Postgraduate Studies, Prof. Timothy. A. Anake, the Dean College of Science and Technology, past and present CST PG Coordinators and the entire management team of Covenant University for their support throughout the course of this research.

I am wholeheartedly grateful to my Supervisors, Prof. S. A. Iyase and Prof. T. A. Anake for their support, guidance and immense contributions towards the completion of this study.

My heartfelt gratitude goes to Dr. O.O. Agboola, the Head of Mathematics Department, Dr. Abiodun A. Opanuga, the Departmental PG Cordinator, Mrs Temitope Ajayi, the Department Administrative Officer and other members of faculty and staff of the Department of Mathematics, College of Science and Technology, Covenant University for their support and encouragement.

My profound appreciation goes to Dr. Sheila A. Bishop and Dr. Michael Agarana for their support and immense contributions towards the success of this research work.

I appreciate the management of Lagos State University of Education (LASUED) headed by Prof. B. B. Okunneye-Lafiaji for granting me the permission to undertake the programme. I also extend my profound gratitude to Mr. Gbenga Olusesan and Dr. Philip Bankole for their sacrifice of love at some critical points and other staff of Mathematics Department, LASUED for their support.

Finally, I appreciate my wife, Mrs. Elizabeth A. Ojo and my children for their love, perseverance and support. God bless you more than anticipated.

codim	Co dimension

ABSTRACT

This research derives conditions for existence of solutions for resonant fractional order boundary value problems with multi-point and integral boundary conditions when the dimension of the kernel of the differential operator equals two on the half-line. Two classes of fractional order boundary value problems were investigated. The first class included two problems with linear differential operator of Riemann-Liouville type. Existence results were established by using Mawhin's coincidence degree theory. The fractional order differential equations under consideration were transformed to abstract equation $Lx(t) = Nx(t)$. The corresponding homogeneous equations were solved to establish conditions critical for resonance. For the first class of problems, it was shown that L is a Fredholm map of index zero and N is L -compact. The existence lemmas and theorem were stated and proved to establish that solutions exist for the two problems. The second class contained two p -Laplacian fractional order boundary value problems with nonlinear differential operator. Riemann-Liouville and Caputo type of fractional derivatives were involved. The extension of coincidence degree theory by Ge and Ren was applied to establish existence of solutions for the two problems. Conditions for resonance were derived by solving the corresponding homogeneous fractional p -Laplacian BVPs. The BVPs were transformed to abstract equations $Mx(t) = N_\lambda x(t)$, $\lambda \in [0, 1]$. It was shown that M is a quasi-linear operator and N_λ is M -compact. The results obtained generalize and complement existing results in the literature, which are applicable in the sciences, engineering, finance and business. Examples were provided to substantiate the results obtained.

Keywords: Fractional order, half-line, integral boundary conditions, Mawhin's coincidence degree, multi-point, p -Laplacian, resonance, two-dimensional kernel.
