**SYNTHESIS AND EVALUATION OF ORGANIC FUNCTIONALISED  
MESOPOROUS (MCM-41) MATERIALS AS NANO-CARRIERS FOR  
ANTITUBERCULAR HYDRAZONE DRUG DERIVATIVES**

**BY**

**OYEKAN, JOSEPHINE OLUWAGBEMISOLA  
(17PCC01650)**

**B.Tech Pure & Applied Chemistry, Ladoke Akintola University of  
Technology, Ogbomosho.**

**M.Sc Biochemical Engineering, University of Birmingham, Birmingham**

**A THESIS SUBMITTED TO THE SCHOOL OF POSTGRADUATE  
STUDIES IN PARTIAL FULFILMENT OF THE REQUIREMENTS FOR  
THE AWARD OF THE DEGREE OF DOCTOR OF PHILOSOPHY (Ph.D)  
IN INDUSTRIAL CHEMISTRY IN THE DEPARTMENT OF  
CHEMISTRY, COLLEGE OF SCIENCE AND TECHNOLOGY,  
COVENANT UNIVERSITY, OTA, OGUN STATE, NIGERIA.**

**MAY, 2024**

## **ACCEPTANCE**

This is to attest that this thesis is accepted in partial fulfilment of the requirements for the award of the degree of Doctor of Philosophy (Ph.D) in Industrial Chemistry, in the Department of Chemistry, College of Science and Technology, Covenant University, Ota, Nigeria.

**Miss Adefunke F. Oyinloye**  
**(Secretary, School of Postgraduate Studies)**

**Signature and Date**

**Prof. Akan B. Williams**  
**(Dean, School of Postgraduate Studies)**

**Signature and Date**

## **DECLARATION**

**I, OYEKAN, JOSEPHINE OLUWAGBEMISOLA (17PCC01650)**, declare that this research was carried out by me under the supervision of Prof. Kolawole O. Ajanaku and Dr. Joseph A. Adekoya of the Department of Chemistry, College of Science and Technology, Covenant University, Ota, Nigeria. I attest that this thesis has not been presented either wholly or partially for the award of any degree anywhere else. All the sources of data and scholarly information used in this thesis are duly acknowledged.

**OYEKAN, JOSEPHINE OLUWAGBEMISOLA**

**Signature and Date**

## CERTIFICATION

We certify that this thesis titled **SYNTHESIS AND EVALUATION OF ORGANIC FUNCTIONALISED MESOPOROUS (MCM-41) MATERIALS AS NANO-CARRIERS FOR ANTITUBERCULAR HYDRAZONE DRUG DERIVATIVES** is an original Research Work carried out by **OYEKAN, JOSEPHINE OLUWAGBEMISOLA (17PCC01650)** in the Department of Chemistry, Covenant University, Ota, Ogun State, Nigeria under the supervision of Prof. Kolawole O. Ajanaku and Dr. Joseph A. Adekoya. We have examined and found the research work acceptable as part of the requirements for the award of the degree of Doctor of Philosophy in Industrial Chemistry.

**Prof. Kolawole O. Ajanaku**  
(Supervisor)

**Signature and Date**

**Dr. Joseph A. Adekoya**  
(Co-Supervisor)

**Signature and Date**

**Dr. Cyril O. Ehi-Eromosele**  
(Head of Department)

**Signature and Date**

**Prof. Semire Banjo**  
(External Examiner)

**Signature and Date**

**Prof. Akan B. Williams**  
(Dean, School of Postgraduate Studies)

**Signature and Date**

## **DEDICATION**

This thesis is dedicated to Almighty God, who led me from the beginning to the end of the program.

## ACKNOWLEDGEMENTS

My profound gratitude goes to God Almighty for the strength, provisions, and divine guidance towards the success of this work. I ascribe all the glory to Him alone and would be eternally grateful to Him. I sincerely appreciate the Chancellor of Covenant University, Dr. David O. Oyedepo, for spearheading the mission of raising an army of a new generation of leaders that will restore the dignity of Africa. This mission gave birth to a world-class university, Covenant University, which served as a platform for this research's successful kick-off and completion. I acknowledge the Vice-Chancellor of Covenant University, Prof. Abiodun H. Adebayo, the Deputy Vice-Chancellor, Prof. Olujide A. Adekeye and the management team for their leadership and administrative roles that made the completion of this research work possible. My sincere gratitude goes to the acting Registrar, Mrs Regina A. Tobi-David, the Dean of the School of Postgraduate Studies; Prof. Akan B. Williams, the Sub-Dean School of Postgraduate Studies; Dr Hezekiah O. Falola, the Dean of the College of Science and Technology, Prof. Timothy A. Anake, for his much-valued support. I appreciate the Head of the Department, Prof. Joseph A. Olugbuyiro, for his valuable contribution and drive for the possible research conclusion. God bless you, Sir.

I sincerely appreciate my supervisor, Prof. Kolawole. O. Ajanaku and Co-Supervisor, Dr. Joseph. A. Adekoya, for their mentorship and the relentless effort and time they have devoted to this research project's success. Thank you very much, sirs, for believing in me and allowing me to work and learn under you. May your committed labour be rewarded with God's favour and all-round blessings.

I also acknowledge and thank The World Academy of Science (TWAS) for allowing me to do my bench work at the CSIR-Indian Institute of Chemical Technology, Hyderabad, India, under the supervision of Prof. Rajkumar Banerjee and Prof. Chittan Ranjan Patra via the CSIR-TWAS Sandwich Postgraduate Fellowship for eleven months.

The entire faculty and staff of the Department of Chemistry, Covenant University, are also appreciated for their guidance throughout my academic journey at Covenant University. Special appreciation goes to the senior lecturers of the department: Prof. Akan B. Williams, Prof. Nsikak U. Benson, Prof. Olayinka O. Ajani, Dr. Tolutope O. Siyanbola, Dr. Cyril Ehi-Eromosele, Dr. Moses M. Solomon, Dr. Winifred U. Anake, Dr. Anuoluwapo A. Akinsiku, and other excellent faculty.

My heartfelt appreciation goes to my family, especially my wonderful husband, Engr. Oluwamuyiwa Joseph Tella for his love, support, commitment and sacrifices, especially financially. I appreciate your understanding through the years, especially when I was away for my bench work. You stood by me prayerfully, financially, and emotionally. God bless you and reward you with all your heart desires. To our son and daughter, Oluwabukunmi Joshua Tella and Oluwafikunmi Joanna Tella, thank you for your understanding and support throughout the program. To my wonderful parents, Engr. & Mrs L. N Oyekan and Mr & Mrs V. O Tella, thank you for your love, prayers, and support throughout this program. I also appreciate my lovely siblings, Mrs Joy Olanipekun, Dr. John Oyekan and Engr. Joseph Oyekan for all their encouragement and support. God bless you all.

<b>CHAPTER ONE: INTRODUCTION</b>	
1.1 Background to the Study	1
1.2 Statement of the Research Problem	7
1.3 Research Questions	9
1.4 Aim and Objectives of the Study	9
1.4.1 Aim of the Study	9
1.4.2 Objectives of the Study	9
1.5 Justification of the Study	10
1.6 Scope of the Study	10
<b>CHAPTER TWO: LITERATURE REVIEW</b>	
2.1 Mesoporous Materials	11
2.1.1 Mesoporous silica nanoparticles	12
2.2 Synthesis of Nanoparticles	14
2.2.1 Top-down approach	14
2.2.2 Bottom-up approach	15
2.3 Synthesis of Mesoporous Silica Nanoparticles	15
2.3.1 Microwave-assisted technique	16
2.3.2 Template-assisted technique	16
2.3.3 Sol-gel synthesis	16
2.4 Nucleation and Growth Mechanism of Nanoparticles	18
2.4.1 Formation of silica nanoparticles	18
2.5 Surface Functionalization of Mesoporous Silicates	19

2.5.1 Layer-by-layer self-assembly	19
2.5.1.1 Electrostatic layer-by-layer self-assembly	20
2.5.2 Chemical surface functionalization	20
2.6 Types of Nanomedicines	22
2.6.1 Inert Materials as Carriers	23
2.6.1.1 Inorganic porous materials as carriers	23
2.6.1.2 Metal-organic frameworks (MOFs) as carriers	26
2.6.1.3 Protein nanoparticles	27
2.7 Drug loading content and drug loading efficiency of nanomedicines	27
2.7.1 Loading and releasing of drugs in mesoporous silica nanoparticles	28
2.8 Mesoporous Silica Nano-Carriers for Anti-tubercular Drug Delivery	30
2.9 Knowledge Gaps and Fillings	33
2.10 Brief Description of Characterisation Techniques	34
2.10.1 X-ray Powder Diffraction (XRD) Analysis	34
2.10.2 Brunauer Emmett Teller (BET) Analysis	34
2.10.3 Fourier Transform Infra-Red (FTIR) Spectroscopy	35
2.10.4 Thermogravimetric Analysis	35

### **CHAPTER THREE: MATERIALS AND METHODS**

3.1 Materials	36
3.2 Apparatus	36
3.3 Equipment	36
3.4 Characterisation of Nano-carriers	36
3.4.1 X-ray Diffraction Analysis	36
3.4.2 Fourier Transform Infra-red (FTIR) Spectra Analysis	37
3.4.3 Morphological Characterisation	37
3.4.4 Zeta Potential Analysis	37
3.4.5 Brunauer–Emmett–Teller (BET) Surface Area Analysis	37
3.4.6 Thermogravimetric Analysis	37
3.4.7 Elemental Analysis (Carbon, Hydrogen and Nitrogen)	37
3.5 Synthesis and Functionalisation of Mesoporous Silica Nano-carriers	37
3.5.1 Synthesis of Mesoporous Nanoparticles using Tetraethyl Ortho-silicate (TEOS) as Silica Source	35
3.5.2 Surfactant Removal Methods	36
3.5.3 Synthesis and Functionalisation of Silica Surfaces using 3-Amino propyl triethoxy silane (APTES) via Co-condensation Method	39

3.5.4 Synthesis of Mesoporous Nanoparticles using Sodium Silicate as Silica Source	39
3.5.5 Synthesis and Functionalisation of Silica Surfaces using 3-Amino propyl triethoxy silane (APTES) via Co-condensation Synthesis	40
3.5.6 Functionalisation of Silica Surfaces using 3-Aminopropyltriethoxysilane (APTES) via Post Grafting Synthesis	40
3.6 Synthesis of Metal Complexes of Isoniazid	40
3.7 Encapsulation of INH and its Metal Complexes (Cu-INH) and (Fe-INH) in Synthesised Nano-carriers	41
3.7.1 Determination of Entrapment Efficiency and Drug Loading Content of Nano-carriers	42
3.7.2 Determination of <i>In-vitro</i> Drug Release Rate	43

## CHAPTER FOUR: RESULTS

4.1 Characterisation of Synthesised Nano-carriers	44
4.1.1 X-ray Diffraction Analysis of the Synthesised Nano-carriers	44
4.1.2 Physical properties of synthesized nano-carriers	45
4.1.3 Zeta Potential Distributions of the Synthesised Nano-carriers	45
4.1.4 BET Analysis of the Synthesised Nano-carriers	46
4.1.5 FTIR Spectra of MCM-41 Materials using TEOS and sodium silicate as Silica Source	49
4.1.6 Thermogravimetric Analysis (TGA) of Non-functionalised and Amino Functionalised MCM-41 using TEOS as Silica Source	50
4.1.7 Thermogravimetric Analysis (TGA) of Non-functionalised and Amino Functionalised MCM-41 using TEOS as Silica Source	51
4.1.8 Elemental analysis of non-functionalised and amino-functionalised MCM-41 nano-carriers using TEOS and sodium silicate as silica source	52
4.1.9 Morphology of Nano-carriers synthesised using TEOS as Silica Source	53
4.1.10 Morphology of nano-carriers synthesised using sodium silicate as silica source	53
4.1.11 Morphology of Post grafted Amino Functionalised Nano-carriers	54
4.2 Synthesis and Characterisation of Copper (II) and Iron (III) Metal Complexes of Isoniazid	55
4.2.1 X-ray Diffraction Analysis of Copper (II) and Iron (III) Metal Complexes of Isoniazid	55
4.2.2 Morphological Studies of INH and its Cu (II) and Fe (III) Metal Complexes	55
4.2.3 Infrared Spectra of INH and its Cu (II) and Fe (III) Metal Complexes	56

4.2.4 Thermo-gravimetric analysis of Cu (II) and Fe (III) metal complexes of Isoniazid, CHN elemental analysis and Inductively Coupled Plasma Atomic Spectroscopy of Cu (II) and Fe (III) metal complexes	57
4.3 Characterisation of Encapsulated Nano-carriers	58
4.3.1 X-ray Diffraction Analysis of Encapsulated Nano-carriers	58
4.3.2 Zeta Potential Measurements of Encapsulated Nano-carriers	59
4.3.3 BET Analysis of Encapsulated Nano-carriers	61
4.3.4 Infra-red Spectroscopy of Encapsulated Nano-carriers	64
4.3.5 Morphology and particle size diameter of Nano-carriers encapsulated in calcined nano-carrier (Cal-MCM-41t)	66
4.3.6 Morphology and particle size diameter of Nano-carriers encapsulated in post-grafted nano-carrier (Post-NH <sub>2</sub> -cal-MCM-41t)	68
4.3.7 Morphology and particle size diameter of Nano-carriers encapsulated in calcined nano-carrier (Cal-MCM-41s)	70
4.3.8 Morphology and particle size diameter of Nano-carriers encapsulated in calcined nano-carrier (Post-NH <sub>2</sub> -Cal-MCM-41s)	70
4.3.9 Transmission Electron Microscopy of Encapsulated Nano-carriers synthesized from TEOS	71
4.3.10 Elemental Mapping of Encapsulated Nano-carriers synthesized from TEOS and sodium silicate	74
4.3.11 Transmission Electron Microscopy of Encapsulated Nano-carriers synthesized from Sodium Silicate	74
4.4 Drug Loading Studies of INH, Fe-INH and Cu-INH from their Nano-carriers	77
4.4.1 Drug loading studies of encapsulated non-functionalised and amino functionalised MCM-41 nanocarriers synthesised from TEOS and sodium silicate using TGA Analysis	77
4.4.2 Drug loading studies of encapsulated non-functionalised and amino functionalised MCM-41 nanocarriers synthesised from TEOS and sodium silicate using UV-spectroscopy analysis	78
4.4.3 <i>In-vitro</i> Drug Release Studies of Encapsulated Nano-Carriers	79

## CHAPTER FIVE: DISCUSSION

5.1 Characterisation of Synthesised Nanocarriers	83
5.1.1 X-ray Diffraction analysis of the synthesised nanocarriers	83
5.1.2 Zeta Potential distributions of the synthesised nanocarriers	84
5.1.3 BET analysis of the synthesised nanocarriers	85
5.1.4 FTIR spectra of MCM-41 materials using TEOS as silica source	86
5.1.5 FTIR spectra of MCM-41 materials using sodium silicate as silica source	88
5.1.6 TGA analysis of non-functionalised and amino-functionalised MCM-41 using TEOS as silica source	89
5.1.7 TGA analysis of non-functionalised and amino functionalised MCM-41 using sodium silicate as silica source	90
5.1.8 Elemental analysis of non-functionalised and amino-functionalised MCM-41 nanocarriers using TEOS and sodium silicate as silica source	91
5.1.9 Morphology of nanocarriers synthesised using TEOS as silica source	91
5.1.10 Morphology of nano-carriers synthesised using sodium silicate as silica source	92
5.1.11 Morphology of post-grafted amino functionalised nanocarrier	92
5.2 Characterisation of Copper (II) and Iron (III) Metal Complexes of Isoniazid	93
5.2.1 X-ray Diffraction analysis of copper (II) and iron (III) metal complexes of Isoniazid	93
5.2.2 Morphological studies of INH and its Cu (II) and Fe (III) metal complexes	93
5.2.3 Infrared spectra of INH and its Cu (II) and Fe (III) metal complexes	93
5.2.4 Thermogravimetric analysis, elemental analysis, Inductively Coupled Plasma Atomic Spectroscopy and Mass Spectra of Cu (II) and Fe (III) metal complexes	94
5.3 Characterisation of Encapsulated Nanocarriers	95
5.3.1 X-ray Diffraction analysis of encapsulated nano-carriers	95
5.3.2 Zeta Potential measurements of encapsulated nanocarriers	95
5.3.3 BET analysis of encapsulated nanocarriers	96
5.3.4 IR Spectra of encapsulated nanocarriers using TEOS as silica source	97
5.3.5 IR spectra of encapsulated nanocarriers using sodium silicate as silica source	98
5.3.6 Morphology and particle size diameter of nanocarriers encapsulated in calcined nano-carrier (Calcined-MCM-41t)	99
5.3.7 Morphology and particle size diameter of nanocarriers encapsulated in post-grafted nano-carrier (Post-NH <sub>2</sub> -Calcined-MCM-41t)	99
5.3.8 Morphology and particle size diameter of nanocarriers encapsulated in calcined nano-carrier (Calcined-MCM-41s)	99

5.3.9 Morphology and particle size diameter of nanocarriers encapsulated in calcined nanocarrier (Post-NH <sub>2</sub> -Cal-MCM-41s)	100
5.3.10 Transmission Electron Microscopy of encapsulated nanocarriers synthesized from TEOS	100
5.3.11 Elemental Mapping of encapsulated nanocarriers synthesized from TEOS	100
5.3.12 Transmission Electron Microscopy of encapsulated nanocarriers synthesized from Sodium Silicate	101
5.4 Encapsulation of INH, Fe-INH, and Cu-INH from their Nano-carriers	101
5.4.1 Mechanism involved in the encapsulation of INH, Fe-INH and Cu-INH on Nanocarriers	101
5.4.2 Drug loading studies of INH, Fe-INH, and Cu-INH from their nanocarriers	101
5.4.3 <i>In-vitro</i> Drug Release Studies of Encapsulated Nanocarriers	104
5.4.4 Comparative studies on the Drug Loading Capacities, Entrapment Efficiencies and Release Rates of Anti-tubercular Drugs encapsulated in different types of MCM-41	106
<b>CHAPTER SIX: CONCLUSION AND RECOMMENDATION</b>	
6.1 Summary of Findings	108
6.2 Conclusion	110
6.3 Contributions to Knowledge	111
6.4 Recommendations	111
<b>REFERENCES</b>	112
<b>APPENDIX</b>	137

## LIST OF TABLES

TABLES	LIST OF TABLES	PAGES
2.1	Gap analysis revealing the gap identifications, weaknesses, sources and gap fillings for the present study	33
4.1	Physical Properties of MCM-41t using TEOS as Silica Source	45
4.2	Physical Properties of MCM-41t using Sodium Silicate as Silica Source	45
4.3	Assignment of IR peaks found in nano-carriers synthesised with TEOS	50
4.4	Assignment of IR peaks found in nano-carriers synthesised with sodium silicate	50
4.5	TGA analysis of Synthesised Nano-carriers using TEOS as Silica Source	51
4.6	TGA analysis of synthesised nano-carriers using sodium silicate as silica source	52
4.7	Elemental contents of non-functionalised and amino-functionalised MCM-41t	52
4.8	Elemental contents of non-functionalised and amino-functionalised MCM-41s	53
4.9	Assignment of IR peaks found in INH, Cu-INH and Fe-INH	57

XRD:	X-ray Diffraction

## ABSTRACT

The use of conventional drug delivery systems for the treatment and management of tuberculosis comes with setbacks that require the development of advanced drug delivery systems for the improved delivery of anti-tubercular agents. Mesoporous silica nanoparticles (MCM-41) have been of great interest as they possess distinctive properties that give them an edge over conventional drug delivery systems. This study focuses on the sol-gel synthesis and amino functionalisation of mesoporous silica nanoparticles via co-condensation and post-grafting methods to deliver anti-tubercular agents such as isoniazid and its metal complexes. Non-functionalised and amino functionalised MCM-41 nano-carriers were synthesised from two silica sources (tetra ethyl orthosilicate and sodium silicate) and characterized with X-ray diffraction (XRD), Brunauer-Emmett-Teller (BET) surface analysis, Fourier-transform infrared spectroscopy (FT-IR), CHNS analysis, Scanning electron microscopy (SEM), Transmission Electron Microscopy (TEM) and Thermo-gravimetric analysis (TGA). The physical and morphological properties of the drug loading and release studies of the nano-carriers synthesised from different silica sources were compared. Non-functionalised and amino functionalised nano-carriers synthesised with Tetra Ethyl Ortho Silicate were revealed to have better well-ordered pores than those synthesised using sodium silicate from their XRD analysis. The morphological characterisation of the nano-carriers using SEM showed that the surfactant removal methods (calcination and acid/ethanol extraction) affected their structural properties. Nano-carriers, Cal-MCM-41t&s + Cu-INH and Post-NH<sub>2</sub>-Cal-MCM-41t&s + Cu-INH had high drug entrapment efficiencies of 87.65%, 76.23% and 92.82%, 90.2% with loading capacities of 17.53%, 15.25% and 18.66%, 18.05%. Amino-functionalised nano-carriers were shown to improve the drug loading and entrapment efficiency of the nano-carriers. The *in-vitro* release study revealed a steady release rate of anti-tubercular agents INH, Cu-INH, and Fe-INH. Cal-MCM-41t&s + Cu-INH and Post-NH<sub>2</sub>-Cal-MCM-41t&s + Cu-INH released the highest amount of INH and its metal complexes. Cal-MCM-41t + Cu-INH, Post-NH<sub>2</sub>-Cal-MCM-41t + Cu-INH, Cal-MCM-41s + Cu-INH and Post-NH<sub>2</sub>-Cal-MCM-41s + Cu-INH released 30.97%, 36.43%, 41.98% and 50.82% at a pH of 7.4 while at a pH of 5.4, they released 39.54%, 47.26%, 52.82% and 66.74% respectively after 14 days. The findings showed that using non-functionalised and amino-functionalised mesoporous silica nano-carriers is a promising drug delivery system for delivering isoniazid and its metal complexes. However, other surface-functionalised MCM-41 nano-carriers should also be studied.
