Abstract

Fly ash and phosphogypsum are industrial waste materials abundantly available in South Africa and worldwide. The staggering increase in the use and disposal of fly ash and phosphogypsum has motivated research to expand its reuse in construction to minimise the extraction of virgin materials.

Disclosure

The authors confirm that the manuscript has been read and approved by all named authors and that there are no other persons who satisfied the criteria for authorship but are not listed. The authors confirm that they have given due consideration to the protection of intellectual property associated with this work and that there are no impediments to publication, including the timing of publication, with respect to intellectual property.

Ethical conduct of research

The authors state that they have obtained appropriate institutional review board outlined in the Declaration of Helsinki for all human or animal experimental investigations. A signed informed consent document has been obtained from all participants included in the study.
